

1. Ideas

• choropleth map

• Isotype

4. Combine and Refine

1. Geographic data section:

(a) By country (b) By state

2. Trends over time

(a) By arrivals

(b) By receipts

3. Comparative data

(a) lesser category (b) more categories

2. Filter

Isotype requires a lot of space, not space efficient. Even though it is appealing, and often lack precision needed for detailed analysis.

2.

Although scatterplot could provide insight on correlation between two variables with linear regression, but it is not meaningful for tourism analysis, making it less relevant.

3.

Can be difficult to read, especially when dealing with multiple years and categories, causing clutter of stacked bar chart.

3. Categorize

• Geographic data:

↳ Tourist arrivals to Malaysia by country

↳ Hotel guests by state

• Trends over time:

↳ Tourist arrivals and receipts

• Comparative data:

↳ expenditure component

↳ mode of transport

5. Question

1. Does the design provide any insight?

2. Are the designs visually appealing?

3. Is it easy to understand?

4. Are multiple views needed?

MALAYSIA TOURISM STATISTICS (2016 - 2023)

Tourist arrivals

Annotation

Receipts

Title : Malaysia Tourism
Statistics (2016-2023)

Author : Tan Jian Kai

Date : 13 October 2024

Sheet : 2

Task : FJTS179

Operation

Tourist Arrivals

Hover on the bar to discover the tooltips that show more details

Year

There will also be a slider to change the variable year to show each year receipt of countries

Receipts

selecting on a line will make: other line opacity lower and create figure ground

Focus
Tourist Arrivals

Receipts

The focus of the visualization is to explore annual inbound tourists to Malaysia and its receipts to better understand how important it is to Malaysia.

Discussion:

• Pros:

↳ The visualization allows user to focus more on tourist arrivals and receipts to get better insight on Malaysia tourism

• Cons:

↳ If our dataset has many countries, it might cause the x-axis to be very long and even not fit in every country in a single row.

MALAYSIA TOURISM STATISTICS (2016-2023)

Hotel guest by state

Focus

The focus of the visualization is to highlight where tourism stay and where they come from, mainly about the travel and accommodation of tourist so that we have insight about which state has most tourist arrivals

Title: Malaysia Tourism
Statistics (2016-2023)

Author: Tan Jian Kai

Date: 13 October 2024

Sheet: 3

Task: F2T3179

Operation

Annotation will be added so that even if the category is too small we

will still be able to identify it through annotation

When hovering on state it will show tooltips about hotel guests number and the zoom slider will zoom in based on map centre drop down menu to give better clarity

zoom:
map centre:

Discussion

Pros:

↳ The choropleth map that shows Malaysia gives geographical clarity of each state and visually appealing

Cons:

↳ The tree map will make it hard to read small values and the bump chart can be cluttered with too many categories

MALAYSIA TOURISM STATISTICS (2016 - 2023)

Title : Malaysia Tourism
Statistics (2016-2023)

Author : Tan Jian Kai

Date : 13 October 2024

Sheet : 4

Task : FIT3179

Mode of Transport

Operation

When hovering on the country it will show tooltips to better understand the country details.

and also it will show where effect to give figure ground. Besides it will has a zoom slider to zoom in certain region to look clearly and in map centre drop down of several region so that we can zoom in based on the map centre.

Focus

- All charts in the visualization is equally important, there is no main focus
- Choropleth map provide a geographic overview of which countries contribute the most tourists to Malaysia
- Sankey diagram shows the distribution of spending among different expenditure components, gives insight into economic impact.
- Zsotype chart emphasizes on how tourists travel to Malaysia in an engaging way.

Discussion

- Pros :
 - ↳ the choropleth map able to fit in all countries, so we will not lose any information
- Cons : data density limitation
 - ↳ Too many countries will make it hard for user to compare and the Zsotype requires a lot of space, not space efficient plus often lack precision.

MALAYSIA TOURISM STATISTICS (2016-2023)

Title : Malaysia Tourism
Statistics (2016-2023)

Author : Tan Jian Kai

Date : 13 October 2024

Sheet : 5

Task : FZT3179

Operation

- legends to display the variable
- slider to zoom in and zoom out as well as changing the parameter of the variable like year
- drop down menu to control the map centre
- every visualization will also have tooltips to further provide the details

Focus

- There is no main focus, all graphs are equally important
- This visualization is to provide a board, multi-faceted view of Malaysian tourism, focusing on:
 - ↳ where tourists are coming from globally
 - ↳ how tourist numbers and receipts have trended over time
 - ↳ how tourists spend their money
 - ↳ where tourists are staying within Malaysia
 - ↳ what transport modes they are using to travel

Details:

Dependencies :

↳ world and Malaysia map topology (json)

↳ vega lite integration

Estimated time and effort :

↳ estimated 1 week

specific requirement :

↳ high resolution display
